

# Chrome Extension - Installation Guide

---

## Overview

ARB Auto Bettor™ is a Chrome extension that assists with automated arbitrage betting across multiple sportsbooks. This guide will walk you through installing the extension in Chrome.

Important: This is an unpacked extension (not published on the Chrome Web Store), so you'll need to load it manually in Developer Mode.

## Prerequisites

- Google Chrome browser (version 88 or later)

- The extension files located at: `backend/ARB_Auto_Bettor/extension/`
- 

## Installation Steps

### Step 1: Enable Developer Mode in Chrome

1. Open Google Chrome
2. Click the three-dot menu (⋮) in the top-right corner
3. Navigate to: Extensions > Manage Extensions
  - Or type `chrome://extensions` in the address bar and press Enter
4. Toggle the Developer mode switch in the top-right corner to ON

### Step 2: Load the Extension

1. Click the Load unpacked button (appears after enabling Developer Mode)
2. Navigate to your project directory
3. Select the folder: `backend/ARB_Auto_Bettor/extension/`
4. Click Select Folder

### Step 3: Verify Installation

You should now see:

- ARB Auto Bettor™ listed in your extensions
- The extension icon in your Chrome toolbar
- Status: "On" with a blue toggle switch

### Step 4: Pin the Extension (Optional but Recommended)

1. Click the puzzle piece icon (Extensions) in the Chrome toolbar

2. Find ARB Auto Bettor™ in the list
  3. Click the pin icon to keep it visible in your toolbar
- 

## Configuration

### Initial Setup

1. Click the ARB Auto Bettor™ icon in your toolbar
2. The popup will open - click Settings (gear icon)
3. Configure your preferences:
  - Enable/disable specific sportsbooks
  - Set notification preferences
  - Configure automated betting parameters

### Backend Connection

The extension connects to your local backend API at <http://localhost:8000>.

Before using the extension, ensure your backend is running:

```
# From the project root directory  
cd backend
```

```
python -m uvicorn main:app --reload
```

Verify the backend is running by visiting: <http://localhost:8000/docs>

---

## Supported Sportsbooks

The extension works with the following betting sites:

- DraftKings
  - FanDuel
  - BetMGM
  - Caesars
  - BetRivers
  - BetUS
  - BetOnline
  - Bovada
  - MyBookie
  - Fanatics
- 

## How to Use

1. Start the backend server (see Configuration section above)
  2. Open a supported sportsbook in your browser
  3. Navigate to the betting page for your sport
  4. The extension will:
    - Automatically detect betting opportunities
    - Display notifications for arbitrage opportunities
    - Highlight profitable bets on the page
  5. Click the extension icon to view current opportunities and statistics
- 

## Troubleshooting

### Extension Not Loading

Problem: "Cannot load extension" error

Solution:

- Ensure you selected the `extension/` folder (not a parent folder)
- Check that `manifest.json` is in the root of the selected folder
- Verify all required files are present

## Extension Not Working on Sportsbooks

Problem: No detection or highlighting on betting sites

Solutions:

1. Check backend connection:
  - Ensure `http://localhost:8000` is running
  - Check browser console for connection errors (F12 > Console)
2. Refresh the extension:
  - Go to `chrome://extensions`
  - Click the refresh icon () on the ARB Auto Bettor card
3. Reload the sportsbook page:
  - Hard refresh with Ctrl+Shift+R (Windows) or Cmd+Shift+R (Mac)

## Permission Errors

Problem: Extension requests additional permissions

Solution:

- This is normal for the host permissions listed in the manifest
- Click "Allow" to enable the extension to work with sportsbooks

## Backend Connection Errors

Problem: Extension shows "Backend Offline" or similar message

Solutions:

1. Verify the backend is running: `curl http://localhost:8000/api/games`
  2. Check your firewall isn't blocking localhost connections
  3. Ensure no other service is using port 8000
- 

## Updating the Extension

When you make changes to the extension code:

1. Go to `chrome://extensions`
  2. Find ARB Auto Bettor™
  3. Click the refresh icon ()
  4. Reload any open sportsbook tabs
- 

## Uninstalling

To remove the extension:

1. Go to `chrome://extensions`
  2. Find ARB Auto Bettor™
  3. Click Remove
  4. Confirm removal
-

# Important Notes

## Terms of Service Compliance

This extension is designed to be 95% automated, 100% ToS compliant:

- It assists with finding opportunities but requires user confirmation
- It respects rate limits and doesn't spam betting APIs
- All bets require final user approval

## Security & Privacy

- The extension only communicates with your local backend (localhost)
- No data is sent to external servers
- All betting credentials remain with the sportsbook sites
- The extension cannot access data from other websites

## Best Practices

1. Always verify bets before confirming (never blindly trust automation)
  2. Monitor your bankroll and set appropriate limits
  3. Keep the backend updated with latest odds data
  4. Don't leave the extension running unattended for extended periods
  5. Test with small bets before scaling up
- 

# Support

If you encounter issues:

1. Check the browser console for errors (F12 > Console tab)

2. Review the backend logs for API errors
  3. Verify all sportsbook sites are accessible
  4. Ensure you're using the latest version of Chrome
- 

## Development Mode Notes

Since this is loaded as an unpacked extension:

- You'll see a warning banner: "Disable Developer Mode Extensions"
    - This is normal - you can dismiss it
  - The extension will be disabled if you close Chrome in some configurations
    - Just re-enable it from `chrome://extensions` if needed
  - Chrome may periodically remind you about Developer Mode
    - This is a security feature - it's safe to keep Developer Mode on for your own extensions
- 

## Version Information

- Extension Version: 1.0.0
  - Manifest Version: 3 (latest Chrome extension format)
  - Minimum Chrome Version: 88+
- 

## Next Steps

After installation:

1. Read the Usage Guide (if available)
2. Configure your settings in the extension popup
3. Start the backend server
4. Visit a supported sportsbook and test the functionality
5. Monitor performance and adjust settings as needed
